

We care about the security of your confidential information

G.T. Reilly & Company's **email encryption system** protects your data from security threats and ensures that confidential information that we send by email reaches you – and only you – safely.

Accessing your encrypted confidential information

Our web-based system is easy to use and does not require you to load any new software. To access your encrypted data, you will need to log on to a web site. Here is a brief description of how you will be able to use this system:

- The first time we send you an email with encrypted data attached, you will first receive an email notifying you of the encrypted information and directing you to the web site of our email encryption vendor, Voltage Security Network.
- At the Voltage Security Network web site, you will be asked to register with your name and email address, as well as a password of your choosing. Once this is done, you will be able to open the initial encrypted email and data.
- When you receive subsequent emails from us with encrypted data, you will need to log on to the Voltage Security Network web site with your password to gain access. Each time, you will first receive an email notifying you that encrypted data is awaiting your attention.

We will only encrypt messages and attachments that contain personal or confidential data such as financial information, account numbers and other confidential documents.

We are pleased to offer this added level of security and confidentiality to our communications with you.

If you have any questions, please feel free to call us at 617-696-8900.
